

Mobrey

Vertical magnetic level switches

- Unique 3 magnet latching switch mechanism
- No springs in switch mechanism
- Weatherproof
- Flameproof
- Direct mount
- Chamber mount
- Displacer controls

Operation

The float carries a stainless steel sheathed permanent magnet which rises and falls in the glandless pressure tube with changing liquid level. A switch mechanism is mounted inside the enclosure adjacent to the pressure tube. Switching is achieved with the unique Mobrey 'three-magnet' system, giving snap-action 'latch-on' switching.

Vertical movement of the float magnet in the pressure tube simultaneously actuates the secondary and tertiary magnets in the switch mechanism to operate the contacts. This 'three-magnet' system enables the float magnet to pass on and actuate switch mechanisms at other levels. Switch mechanisms already actuated cannot re-set until the return of the primary magnet actuates the magnet system once again.

Introduction

Whether you require a switch for critical area applications or just general purpose control, the extensive range of Mobrey switches ensures that we will always have a solution to your particular problem.

A choice of carbon steel chambers is available, or for more vigorous applications we supply a series of 316 stainless steel chambers. A variety of tank and process connections is available to make installation simple and economic. This gives you the choice to meet your application in keeping with your budget.

Mobrey vertical magnetic level switches for industrial and process control use have been available for over 20 years and have been steadily gaining a reputation for quality and reliability.

Based on the industry standard boiler water level controls these controls employ the same three magnet switch mechanism for snap-action latching switching.

The design of this unique switch mechanism overcomes all the inherent problems of mercury tubes and micro switches. Even under severe vibration conditions there are no springs to cause contact bounce, hover, or even failure. The snap action magnets give positive stable latching time after time after time.

There are two switching functions available : 2 x SPST (SPCO) switching or DPDT (DPCO) switching, and each comes in four variants :-

- General purpose use with silver cadmium oxide contacts for long life.
- Low power circuit with gold plated contacts for use in low current/voltage applications such as I.S. circuits.
- High power circuits giving up to 10A switching capability.
- Hermetically sealed for the ultimate in reliability - sealed for life.

When controls are required to operate in extreme conditions, the unique Mobrey hermetically sealed switch provides dependable life long operation that you can rely on. With all its moving parts and contacts completely enclosed, this genuine hermetically sealed switch is suitable for use in corrosive atmospheres and low temperature environments.

Features

- Relevant chambers are supplied CE marked and fully compliant with the Pressure Equipment Directive (97/23/EC)
- Unique switching mechanism - totally reliable
- No springs in switch mechanism - positive snap action switching
- Vibration resistant - eliminates spurious trips
- Multi-switching models - cost effective control
- Genuine hermetically sealed switch option - totally safe and secure
- Extensive range of chambers - suitable for most applications
- Designed to ASME B31.3
- Weld procedures approved to EN ISO 15614-1 and ASME IX
- Welders approved to EN 287-1
- Material certification to EN 10204, 3.1
- Materials to ASTM and B.S. Standards

Approvals

Underwriters Laboratories (UL) Approval
Explosion Proof for Class I, Div 1, Groups B, C & D
Class II, Div 1, Groups E, F & G

General Area, Weatherproof type NEMA 4X

Canadian Standards Association (CSA) Approval
Explosion Proof for Class 1, Groups B, C & D

General Area, Weatherproof to NEMA 4X

ATEX Approval
Flame Proof ATEX II 1/2G, EExd IIC T6
($-50^{\circ}\text{C} \leq T_a \leq 60^{\circ}\text{C}$)

Intrinsically Safe Use

For use in intrinsically safe circuits, gold plated switch contacts are recommended (see page 4). Users are reminded that it is their responsibility to obtain the necessary system approval and licences for such circuits.

EN ISO 9001 : 2000

Mobrey Ltd has been assessed and approved by Lloyds Register Quality Assurance against BS EN 9001 : 2000 for the design, development, assembly and re-calibration of precision instruments and systems for the measurement and indication of electrical signals, gas and liquid density, viscosity, pressure, level, flow and water/steam systems.

Section through type H4 switch mechanism

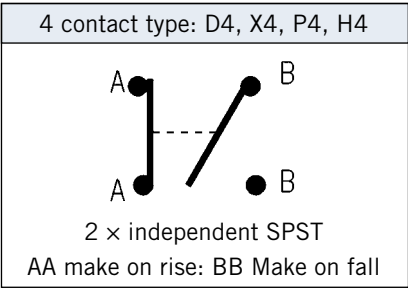

Hermetically sealed switch mechanism

Quality Assurance

With over 20 years worldwide experience in the major power, nuclear and petro-chemical industries, Mobrey Measurement is able to accommodate testing, surveying and documentation requirements as specified at the time of order. Inspection by customers or nominated inspection agencies can be arranged.

Mobrey switch mechanisms

Note: For DPDT operation, installer must common any one pair of A and B wires in the terminal block for each of the two ends of the switch mechanism.

- Type D4, D8: General purpose switch mechanism.
Type D4U, D8U: General purpose switch mechanism for UL & CSA
Type X4, X8: High current switch mechanism.
Type P4, P8: Switch mechanism with gold plated contacts for use in low power or intrinsically safe circuits.
Type H4, H8: Hermetically sealed mechanism with gold plated contacts. All moving parts and contacts enclosed in an inert gas filled stainless steel enclosure. Suitable for use in low temperatures, contaminated atmospheres and intrinsically safe circuits.

Electrical rating

Type	Temp wetside °C	Low temp use	AC max. values			DC max. values			
			VA	Volts	Amps	Watts	Volts	Res amps	Ind amps
D4, D8	400	No	2000	440	5	50	250	5	0.5
D4U,D8U	400	No	2000	440	5	50	250	5	0.5
X4, X8	250	No	2000	440	10	50	250	10	0.5
P4, P8	400	No	6	250	0.25	3.6	250	0.25	0.1
H4, H8	250	-50°C	2000	440	5	50	250	5	0.5

Each switch mechanism has flying leads which are factory wired to ceramic terminal blocks fixed in the switch enclosure.

Warning

Gold plating on the contacts of P4 and P8 switch mechanisms may be permanently damaged if the mechanisms are used to switch circuits with values greater than those shown above.
Switches must not be used for the direct starting of motors. Contacts should be wired in series with the operating coils of relays, contactor starters or solenoid valves and fused separately.

Switch enclosures

Weatherproof NEMA 4X / IP66.

Aluminium alloy based/drawn steel cover.

- Type R4N: Fixed switch
Type S4N: 94mm switch adjustment
Type L4N: 194mm switch adjustment

Flameproof & Explosion Proof (Weatherproof NEMA 4X / IP66)

Aluminium alloy base and cover "A"
Cast iron base and cover "I"

- Type R7A/R71: Fixed switch
Type S7A/S71: 94mm switch adjustment

Conduit entries

Enclosures supplied with four contact switch mechanisms have a single 1" NPT conduit entry.
Enclosures supplied with eight contact switch mechanisms have 2 × 1" NPT conduit entries.

Tube and Unions: 316 stainless steel throughout. Welded construction with additional swaging technique to ensure maximum integrity.
Individually pressure tested to 150 bar (operating pressure will be limited by float or flange specified).

Paint Finish: Black stove paint. Epoxy paint finishes available on request.

1.0 Direct mount displacer controls

Mobrey displacer operated controls are ideal for sump application and other top mounting duties such as low level alarm in deep tanks. Their principle of operation also makes them suitable, in a modified form, for very high pressure or low S.G. applications.

The four most popular displacer arrangements are shown in this schematic diagram, which covers most of the likely applications. However, should you have a different requirement, we would be pleased to quote a model for your particular application.

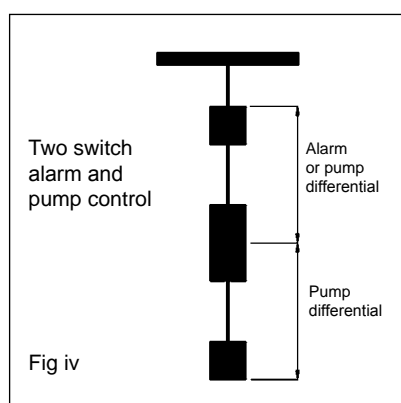

Principle of operation

The displacer element, made of 316 stainless steel, is suspended on a stainless steel cable from a spring. The element is always heavier than its equivalent volume of the liquid in which it is to operate, and so will extend the tension spring at all times. In free air, the spring will be extended to a known length, controlled by a mechanical stop to prevent overstressing. Fixed to the spring is the float rod and magnet assembly, free to move up and down as the spring extends or contracts, and outside the pressure tube in the usual manner is the switch mechanism.

As liquid rises to cover the displacer element, a buoyancy force is created equal to the weight of the liquid displaced. This force in effect is seen by the spring as a reduction in weight, causing the spring to contract, hence moving the magnet upwards inside the pressure tube and actuating the switch mechanism. On a falling liquid level, the displacer element is uncovered and the spring sees an increasing effective weight, causing the spring to extend and move the magnet to re-set the switch mechanism (Fig i and v).

This simple principle can be refined to operate a single switch over a very wide differential by providing the buoyancy force from two elements instead of just one (Fig ii).

Two switch models are available for either two alarm duty with two narrow differentials (Fig iii) or for pump control/alarm duty with appropriate differentials (Fig iv).

Displacer control

Fig v

In all cases, because the elements are suspended on a cable, switching or control levels can be several metres below the mounting flange, and are fully field adjustable by re-setting the elements on the cable.

Notes:

- Supplied with 3m 316 stainless steel displacer cable as standard. Other lengths available on request.
 - Base material will be cast iron whenever 8 contact switches are specified
- Customers must state operating pressure, temperature and specific gravity, together with function of each switch mechanism when ordering.

Due to component tolerances, dimensions DB, E and S given on page 7 are approximate and may vary on each control by up to 10mm. Setting the control to operate at the required level can be achieved on site by adjusting the element up or down on the cable as necessary.

Displacer types and dimensional details

Single switch narrow differential: 11D

Specify for alarm duty.

Switching level can be changed by simply moving the displacer up or down the cable.

11D St. Steel : A = 216 Ø = 60.3

Switch types	D4 D4U	P4	X4	H4	D8 D8U	P8	X8	H8
S.G.	0.6	0.75	1.0	1.2	0.75	1.0	1.2	
S min	315	335	365	380	275	320	340	
E	90	70	60	55	135	105	90	

S min = Adjustable distance to upper switching level.

E min = Differential

DB = Minimum dead band

Two switch 2 narrow differentials: 18D

The displacers are positioned to form two elements of similar lengths, such that two alarm points may be given. This arrangement is typical of sump application.

18D St. Steel: A = 216 Ø = 60.3

Switch types	D4 D4U	P4	X4	H4	D8 D8U	P8	X8	H8
S.G.	0.6	0.8	1.0	1.2	0.8	1.0	1.2	
S min	390	385	375	365	355	350	345	
E min	90	70	60	55	135	105	90	
Dead band	200	230	255	310	165	215	250	

Single switch wide differential: 12D

The two displacer elements are positioned at any point on the cable to correspond to the switching levels required. When the liquid level drops to the lower displacer the switch is actuated and starts (or stops) a pump; when the liquid rises to the upper displacer the switch is again actuated to stop (or start) the pump.

12D St. Steel: A = 216 Ø = 60.3

Switch types	D4 D4U	P4	X4	H4	D8 D8U	P8	X8	H8
S.G.	0.5	0.8	1.0	1.2	0.75	0.8	1.0	1.2
S min	415	430	430	425	390	390	400	400
E min	165	110	95	80	205	200	165	140

Two switch 2 wide differentials: 13D

A pump is controlled between the middle and the lower pump displacers positioned on the cable at the required levels. Should the level rise to the upper displacer this actuates the upper alarm switch which remains actuated until the level drops to the middle displacer. Alternatively, the upper switch could control a second pump.

13D St. Steel: A = 152 B = 304 Ø = 60.3

Switch types	D4 D4U	P4	X4	H4	D8 D8U	P8	X8	H8

Dimension D	118	122	127	132	137	141	147	152	156	

Notes: C = Highest operating liquid level

D (Multi switch) = Lowest operating liquid level

D (Single switch) = Reset level

D-C = Wet switching differential (max)

All dimensions in mm.

NOTE: Dimensions given are for reference only, and must be certified on order.

Dimensional data: enclosures	Duty	Height G	Conduit thread*	Switch adjustment	Weatherproof rating
Type					
R7A, R7I	Flameproof & Explosion proof	190	1" NPT	None	IP66 to IEC60529 (NEMA 4)
S7A, S7I		300		94	
R4N	Weatherproof	170	1" NPT	None	IP66 to IEC60529 (NEMA 4)
S4N		275		94	
L4N		375		194	

*Enclosures for use with 8 contact switch mechanisms have both conduit entries threaded, whilst those for use with 4 contact switch mechanisms have only one conduit entry.

Technical Data

Mobrey vertical level controls are manufactured to the highest standards of quality with only certified materials: BS EN 10204 : 2004-3.1. Design of Mobrey chambers is in accordance with ASME B31.3. Relevant chambers are supplied CE marked and fully compliant with the Pressure Equipment Directive (97/23/EC).

Weld procedures approved to EN ISO 15614-1 and ASME IX, welders approved to BSEN 287-1. Circumferential and set-on branch welds are full penetration welds, with visual inspection in accordance with ASME B31.3 "normal service" requirements and our company standard 417.

All pressure retaining assemblies are hydrostatically pressure tested to a minimum of $1.43 \times$ maximum working pressure or to flange standard requirements.

Radiography or other NDT techniques can be accommodated provided that they are specified at time of order entry.

Inspection

Whilst Mobrey employ inspectors in house, unconnected with production, customers frequently ask for outside inspection. We are happy to accommodate nominated inspectors if agreed at order entry.

Some specifications require a quality control plan detailing inspection points and hold points. Mobrey will produce these QC plans for customer approval if agreed at order entry.

You can rely on us

The Mobrey range of vertical liquid level controls is designed for operation in a wide variety of applications.

Typical Applications

Separators	Water Sumps
Compressors	Scrubbers
Knock-out Pots	Fractioning Columns
Condensers	Flash Vessels
De-aerators	Process Vessels
Storage Tanks	Condensate Tanks
Service Tanks	Drainpots
Header Tanks	Accumulators
Effluent Sumps & Tanks	Fuel Tanks
Heat Exchangers	Feedwater Heaters
Lude Oil Tanks	Surge Drums

Mobrey level switches are used for the control of liquids by companies all over the world.

Shell	Bechtel
Exxon	Bellili
Amoco	Ontario Hydro
Fluos	Nissaei-Sangyo
Hyundai	Foster Wheeler
British Petroleum	Siemens
Mobil	Mannesmann-Demag
Texaco	Catalytic
Ingersoll Rand	Techni
Compair	Technipetrol
Honeywell	Nuovo Pignone
Wemco	Dresser
